Project session quick reference

A focused conference adaptation

This 50-minute session practices selected planning decisions. It is not completion of the original four-hour module or a project-management certification.

The case

A fictional portable classroom remains offline after work stalled between facilities and IT. The principal receives assurances but no dependable completion date. Use only fictional or generalized details.

50-minute route

0-5 min: What would you do next?

5-13 min: Define the work before expanding it

13-25 min: Make ownership and dependencies visible

25-37 min: Communicate progress and check the change

37-48 min: Build a small plan and test it with a neighbor

48-50 min: Choose the next conversation

Success criteria

State an in-scope outcome and an explicit exclusion for the case.

Identify a dependency, an accountable owner, and an escalation trigger.

Propose a usable update and one delivery measure plus one adoption measure.

Revise a next-step plan using evidence and a colleague’s question.

Next step

Name a person, decision, evidence, and review date.
