Title

Coaching That Clicks: Small Moments, Meaningful Growth

Subtitle

Using Micro-Teaching, Video Reflection, and Evidence-Based Coaching

Description

A teacher watches a recording of a lesson and discovers something surprising: the students who seemed engaged weren't the ones doing most of the thinking. What happens next? Explore micro-teaching, a research-supported approach to instructional coaching that uses short video clips, evidence of student learning, and focused reflection to improve teaching practice. Experience a guided coaching conversation, practice giving descriptive feedback, and discover how small changes can lead to meaningful professional growth. Leave with a practical coaching protocol and a plan for helping teachers reflect on their practice without turning video into another evaluation tool.

Learning outcomes

Identify evidence of student learning and instructional patterns in a short teaching example.

Practice a structured, supportive coaching conversation using the Notice-Wonder-Next protocol.

Develop a practical plan for beginning a teacher-directed micro-teaching cycle.

Audience

Instructional coaches, Teacher leaders, Campus administrators, Professional learning facilitators

Requirements

50 minutes; theater-style seating or rows. Presenter computer, projector, audio, and internet. Participant devices optional. Nearby conversations, digital observation guide, optional print copies. No accounts, preparation, or advance registration required.

Format

Presenter-led interactive session with video observation, individual reflection, partner conversations, and practical application.
